

Coastal Teak

PRODUCT OVERVIEW

Our rustic Coastal Teak furniture offers a worn, distressed look made from solid, kiln-dried teak wood.

We utilize most of the raw teak including knots, sap wood and other rustic features to recreate a natural character & antiqued feel of each finished piece of furniture.

Even though the teak has been kiln dried, it is solid wood. In an ever changing hot/cold environment with changes in humidity, expect modest splitting, checking and possibly lifting. This is all a natural thing that happens with solid rustic wood. When exposed to the elements, the water-based finish will eventually wear away and uncover the unfinished yellow natural teak underneath, which will then start its own 'natural' weathering process which over time will acquire the silvery-gray patina that is the characteristic of untreated teak when exposed to the outdoors.

*Please note: during the transition period, the appearance of the furniture will be uneven and blemished, but will develop a uniform silvery -gray patina, same as driftwood found on the beach or lakeside.

FINISH

Our multi-step distressing & finish starts with a mold & mildew inhibitor, then a water-based commercial grade wash provides a driftwood gray overlay. The wood is then sealed with Golden Care® Teak-Shield. While the furniture requires very little maintenance (see below) we recommend for the end-user to continue applying Teak-Shield to aid the longevity of the original look. To prolong the life of the applied finish even further, we recommend placing the furniture in a covered area. These are recommendations and not requirements.

CARE & MAINTENANCE

Clean the furniture by adding dish soap to ¼ bucket of warm water and wipe along the grain with a soft cloth. Rinse with water using your garden hose (low pressure) and let dry. Applying with Golden Care® Teak-Shield will extend the UV protection for the finish.

*Please note: Do not apply teak oils, sealers or other products meant for treating raw yellow teak to this gray 'finished' teak product, as that will interfere with the factory finish.
